

DDS™ Unity

Analytics Expedition Unshackled

Provide a consolidated experience for Analytics community that enables collaboration and capability enablement to expedite the analytics journey from idea to deployment. The Portal seamlessly integrates several guardrails provided by information governors to regulate and streamline the Analytics Capabilities in a transparent manner.

Democratize your Analytics Journey

Ensure compliance to Decision rights and Data Security standards

Easy and simple interface to access all the required and approved computes

Support Collaboration through a roject based structure

Supports publishing of Models as API and applications through single click

Bundled approval workflows enabling transparent and frictionless governance

WHY CHOOSE D CUBE'S EXPERTISE

Democratizing Insights - Friction Free

Enterprises are moving towards democratizing their insight footprint leveraging cloud as a change agent. In order to innovate successfully in this new world there is a strong need to have frictionless governance processes embedded to ensure compliance and security standards are met while no additional bottlenecks are created.

DDS Unity bridges this gap of ensuring Enterprise grade security and compliance while providing a frictionless interface to the several data citizens to utilize the Insight footprint to its potential.

DDS™ UNITY

Govern Adaptation of Tools, Data and Compute Assets

Rapidly Mutating Technology Components coupled with the need for experiment driven innovation from the analytics community results in significant information governance challenges. Enterprises are in a situation to compromise the need of the analytics community in order to adhere to governance requirements. DDS™ unity helps in adhering to all governance policies and breeding innovation.

Built-in Analytics Tools

Support all Insights tooling including Databricks, Sagemaker, Several Datawrangling tools and Container ecosystem

Add On Insights Tooling

Easy plug-in of 3rd party datascience workbenches, Data wranglers and other exploration tools

Collaborative Environment

Project based structure encourages collaboration within the team providing portal for knowledge sharing across enterprise

Poly Cloud Support

Ability to work in a Poly cloud environment with resources and data spread across clouds or accounts
